

# Don't let leaks go undetected.

**Wireless  
Systems  
Available**

**Flood Control Sensors & Switches for washing machines,  
water tanks, water mains and HVAC condensate systems**

## Dependable Flood Control

*Automatically shuts off water supply when a leak is detected*

### FM-090 Washing Machine Alarm/Shut-Off System

FloodMaster's FM-090 can prevent extensive water damage when a washing machine, particularly one in an upstairs laundry room or apartment, fails.

Available with wireless sensor, model FM-190

- Automatic shut-off of both hot and cold water lines when leaking water comes in contact with the sensor
- Easy installation – easy reset
- Requires no wiring – simply plugs into wall outlet
- Complete system functions as a local alarm but can be connected to a home security system
- May qualify washer owner for insurance discount

### FM-094 Hot Water Heater Feed Water Alarm/Shut-Off System

The FM-094 from FloodMaster is designed to minimize water damage when a hot water heater or water tank failure occurs. 3/4" sweated valve is standard. 3/4" or 1" threaded valves are also available.

Available with wireless sensor, model FM-194

- When sensor detects leaking water, the system sounds an alarm, while automatically shutting off the feed water intake
- Reduces insurance claims
- Easy installation, with tank-to-tank reinstallation capability
- All corrosion-free materials
- AC power – no batteries to change
- Reset button
- Can be connected to a home security system

## FM-180 Total Water Main Wireless Shut-Off System

The FloodMaster FM-180 system automatically shuts off the water supply line to the building when a leak is detected. This system protects against extensive water damage where plumbing or appliance failures could cause flooding.

- Ideal for commercial applications
- Multiple valve sizes offered
- Includes audible alarm
- Easy installation – easy reset
- Silence mode
- Multiple sensors can be ordered for a single alarm system
- Indicator for low battery (sensor puck)
- Remote alarm box location capability
- Can be connected to a home security system

Available with wired sensors, model FM-080

***Wireless unit is ideal for leak detection on multiple floors or levels***

### FM-095 (Battery)

### FM-096 (Security System) Water Alarm

These simple FloodMaster leak detection devices are easily placed in proximity to objects with the potential for non-flammable, conductive liquid leaks. Typical applications include dishwashers, washing machines, hot water heaters, sump pumps, tubs and sinks.

- FM-095 uses a separately sold 9-volt alkaline battery with a 3-year life, while FM-096 interfaces with a security system
- Both provide a loud audio alarm
- Easy installation – easy reset

Security System is available with wireless sensor, model FM-196

### FM-097 Condensate Leak Detector

Designed for use in HVAC and HVACR systems, the FloodMaster FM-097 is a complete alarm system for condensate leak and water chiller leak detection. When water is detected by the sensor, an alarm sounds and the HVAC unit will automatically shut off feed water flow.

- For both air conditioners and roof-top or inside-building water chillers
- Easy installation – easy reset
- Reusable

Available with wireless sensor, model FM-197

### Speedy Valve

FloodMaster's Speedy Valve is a patented integrated valve that allows easy shut-off of water to a variety of appliances without using a hand tool or damaging the shut-off knob. Faucet valves, toilet valves and dishwasher valves are all ideal applications.

- Available in varying high-pressure hose lengths
- By-pass seized or stuck quarter-turn valves
- Easy to turn quarter-turn ball valve
- No soldering
- No system drain downs
